

INTERNATIONAL DIALING CODES

Below is a [table](#) listing **Country Codes**, **IDD (International Direct Dialing) prefixes**, and **NDD (National Direct Dialing) prefixes**. If you are not familiar with how these are used, *please review the definitions below before using the table.*

Country Code

The **country code** is the *national prefix* to be used when dialing **TO** that particular country **FROM** another country. In some cases you will also need to dial a *city or area code*. When a country name appears in the table as a link, there will be additional information regarding city or area codes. If you are aware of more current city/area code information than that shown, or if you can add a code, please [send in a report](#).

IDD Prefix (International Direct Dialing)

The **IDD prefix** is the *international prefix* needed to dial a call **FROM** the country listed **TO** another country. This is followed by the country code for the country you are calling (see above). The IDD situation in many countries has been changing regularly. If you are aware of more current information than that shown here, please [send in a report](#). Some countries have multiple **IDDs**, with each one used by a different long-distance carrier.

NDD Prefix (National Direct Dialing)

The **NDD prefix** is the access code used to make a call **WITHIN** that country from one city to another (when calling another city in the same vicinity, this may not be necessary). The NDD is followed by the city/area code for the place you are calling (city/area codes, where applicable, can be viewed by following the link from the country name on the table below). Phone numbers are often written in this format: +44-(0)1224-XXXX-XXXX. This expresses the numbers used for both international and national long-distance calls. In the example, +44 indicates the country code, while (0) indicates the NDD. When dialing from outside the country, the NDD *would not* be used after dialing the country code; when dialing from within that country, the NDD would be used, but the country code would not. **NOTE: All city/area codes used on this site are expressed for use in international calling; for national calls, prefix the area/city**

- These countries are part of the North America Numbering Plan (NANP), though they may be far removed from North America (and Mexico is not included). The country code for all NANP countries is 1; the numbers that follow function similar to area codes in the U.S. and Canada.
- ** Await a second tone at this stage
